PROFESSIONAL SUMMARY RECRUITER FOCUS

Frontend Developer with hands-on experience building React applications, responsive UI/UX, and practical business workflows for real users. Developed systems across stock management, payroll management, and elderly health monitoring, giving me exposure to inventory data, payroll processes, and health record interfaces. Worked with RESTful API collaboration, Supabase/database workflows, Lazada API, LINE Bot notifications, QR Code flows, and GPS Tracking within existing project scopes. As a Junior Frontend Developer Intern at Acacia I.T. Services (Thailand), I collaborated with the backend team to connect frontend interfaces with application data and API responses. I focus on clear screens, responsive layouts, and frontend work that helps users complete tasks efficiently. My career goal is to continue growing as a Frontend Developer in a Thai tech company or startup environment.

TECHNICAL SKILLS CORE STACK

Languages & Frameworks

JavaScript (ES6+) React PHP Node.js (basic)

Styling & UI

HTML5 CSS3 TailwindCSS Bootstrap 5

Tools & Version Control

Git GitHub React Vite

Databases & Backend

MySQL Supabase PostgreSQL

Deployment

Vercel Netlify

WORK EXPERIENCE INTERNSHIP

Acacia I.T. Services (Thailand) Co., Ltd. - Junior Frontend Developer Intern

2025 - Present

Frontend development internship focused on business web applications

- Designed and developed a Payroll Management System using React and Node.js for employee and administrator workflows.
- Built frontend screens for employee data management, salary calculation flow, payslip generation, and Excel-based import/export.
- Implemented responsive UI/UX across desktop and mobile layouts with reusable component-based interface patterns.
- Collaborated with the backend team to connect frontend data flow with RESTful API endpoints and application data.
- Tested and debugged API integration issues to keep payroll forms, tables, and generated outputs consistent with backend responses.
- Used Git and GitHub to manage frontend changes during development.

PROJECTS SELECTED WORK

01 Electronic Parts Stock Management System Inventory platform

Built a stock management system for electronic parts to help organize inventory data and reduce manual tracking work. The system uses React Vite for the frontend, MySQL/Supabase for data handling, and QR Code flows for item identification. LINE API supports notification use cases, while Lazada API integration adds a practical e-commerce connection for product and stock workflows.

React Vite MySQL Supabase LINE API QR Code Lazada API

02 Payroll Management System Business web app

Developed payroll workflows for managing employee payroll data through a responsive React Vite interface styled with TailwindCSS. The system supports XLSX-based data processing for payroll preparation and structured storage with Supabase/PostgreSQL. Its strongest technical focus is turning spreadsheet-based payroll inputs into cleaner web-based workflows and report-ready outputs.

React Vite TailwindCSS XLSX Supabase PostgreSQL

03 Elderly Health Monitoring System Health monitoring platform

Created an elderly health monitoring system to record and review health information for senior care use cases. The platform uses PHP, MySQL, and Bootstrap 5 for the application structure, with Chart.js for visual health summaries. LINE API supports alert communication, while GPS Tracking provides a location-focused feature for monitoring and care coordination.

PHP MySQL Bootstrap 5 Chart.js LINE API GPS Tracking

EDUCATION ACADEMIC BACKGROUND

B.Sc. Information Systems & Digital Business Innovation

GPA 3.02

Rajamangala University of Technology Isan (RMUTI)

2019-2022

Vocational Certificate, Business Computer

GPA 3.83

Nakhon Ratchasima Technical College

2017-2019

LANGUAGES PROFICIENCY
